

Step 0: Read & understand the problem statement

BrightTV's CEO has an objective to grow the company's subscription base for this financial year. He has approached you to provide insights that would assist CVM (Customer Value Management) team in meeting this year's objective. The dataset attached contains information on the user profiles and viewer transactions for BrightTV.

Please prepare a 20 min presentation covering the following topics:

- Provide insights on user and usage trends of BrightTV.
- What type of factors influence consumption?
- What content would you recommend to increase consumption on the days with low consumption?
- What type of initiatives would you recommend to further grow BrightTV's User base.

Notes:

- Times and dates in the dataset are supplied in UTC and should be converted to SA time.
- Consumption is split per session, i.e. for every session a subscriber has, there will be 1 record.
- Any additional data that may assist in the presentation is welcomed

Step 1: Define your analytical framework

i) Understanding the business requirements :

ii) Identify what metrics matter (consumption, sessions, user growth)

iii) Try to map which data columns answer which questions

Step 2: Answer data-driven questions

Who are BrightTV's users ?

When do most people watch?

What do the most people watch

GROW USER BASE

For How long do they watch?

Which subscribers are actually engaged in watching ?

Step 3 :Data Exploration

I). check data shape, columns and data types

II) Identify missing or null values

III) Check date ranges and convert UTC to SA time

IV) Join the Demographic table with Viewership table on UserID

V) Use some date functions to create some other columns (Hour of the day, day of the week, duration in minutes)

Take the Age and Group it into age group categories

Step 4 : Data Cleaning

i) Handle blank entries Gender, Race and Province

ii) Resolve duplicate channel names (e.g. "SawSee" vs "Sawsee", "SuperSport Live Events" appears twice)

iii) Validate UserID matches between both sheets

Step 5: Data Analysis

i) User profile analysis

ii) Viewership trends over time (daily, weekly, by month)

iii) Channel popularity by volume and total watch time

iv) Peak vs low consumption time slots

v) Sessions per user (engagement depth)

Step 6: Start Generating Insights

INSIGHTS

What factors drive/reduce consumption?

Which days/times have low consumption and why?

What content performs on low days?

What does the data say about growth potential?

Step 7: Recommendations

Plausible recommendation

Initiatives to grow the subscriber base

Any external data to support recommendations

Content recommendations for low-consumption days

Targeting strategies by demographic

Step 8: Build the Presentation

Step 9: Review & Finalise

Build charts and
visuals for each
insight

Gather talking
points for the
insights

Try to think of
possible questions
that the CEO or
CVM could ask?

check all numbers and
charts

Peer review if possible

Export and submit
